Subject: Drop surge protection

DIFFERENCES BETWEEN GAS TUBE & SIDACTOR (solid state) SURGE PROTECTION

	Sidactor	Gas tube
Response Time	1 ns less voltage let through	Variable, usually 5000 ns
Reliability	Does not degrade	Degrades every time it takes a hit
Life span	Unlimited	Shortens every time it takes a hit
Clamping Voltage	Low clamping voltage	Higher clamping voltage Therefore more voltage let through
Current Handling	1000 Amps	Usually 20,000 amps reduces each time it takes a hit Continuous small transients can reduce current handling quickly
